The background is a complex, abstract composition of numerous overlapping triangles and polygons. The colors range from deep purples and blues on the left to bright yellows and greens on the right, creating a sense of depth and movement. The shapes are sharp and angular, contributing to a modern, digital aesthetic.

DECIDIR

¿QUIÉN DECIDE QUÉ SE HACE EN BIOTEC?

We like to think that venture capital is driven by the power of good ideas. But by the numbers, it's men who have the keys. Last year, female founders received about 2 percent of venture capital funding — and the numbers are moving in the wrong direction. While the average investment in companies led by men jumped 12 percent, to \$10.9 million, the average investment in companies led by women dropped 26 percent, to \$4.5 million. Statistics tell us that funders award women founders just a quarter of the funding they ask for. Male founders, meanwhile, are getting half.

Solo el 9,6% de los inversionistas de riesgo en biotecnología son mujeres.

Babel Ventures, Brazil

Women-led Babel Ventures raises \$30 million to back Latino entrepreneurs

October 5, 2017

The Bay Area fund is the second Latino-focused venture fund to launch this week. Both Babel Ventures and LEAP Partners are trying to bring more venture financing to an underfunded startup demographic. (LEAP announced the first two investments from its early-stage venture fund for Latino-owned businesses in the U.S. and Mexico). Babel Ventures stands out as a women-run fund; founders Bárbara Kunde Minuzzi and Daniela Arruda both previously raised

SHORT SHARP SCIENCE 27 October 2016

Male contraceptive injection works – but side effects halt trial

An injected male contraceptive has been shown to be almost 100 per cent effective in a trial involving 320 men.

The hormone-based jab is designed to lower [sperm](#) counts by acting on the brain's pituitary gland.

Over a year-long trial, the injection was effective in nearly 96 per cent of couples. However, researchers said more work was needed to address the treatment's [reported side effects](#), which included depression and other mood disorders, muscle pain, acne and increased libido.
